SITEWASH BATH

SITEWASH BATH (SB)

SiteWash Bath is used in all situations where water or electricity are unavailable.

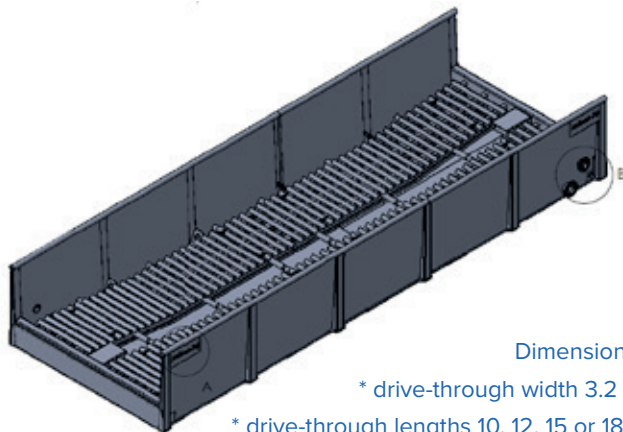

The SiteWash Bath system enables the tyres and profile of the vehicle to be washed as it drives through the water bath. The ribbed drive-through profiles pull open the wheel profile allowing the dirt to fall from through the grooves. The tyres can be rotated more than once during the wash cycle. This makes the SiteWash Bath effective over the short and long term.

For instance, on building sites, stone quarries, waste dumps, recycling sites, mines and industrial terrains.

Please note, the sludge and impurities from the tyres that fall into the depositing tank must be regularly removed by mechanical means or with the help of vacuum trucks.

Stop dirt!
Prevent it from entering or leaving your site!

Dimensions:

* drive-through width 3.2 m

* drive-through lengths 10, 12, 15 or 18m

BENEFITS:

- Simple to maintain
- Portable
- Easy to install
- No pumps or controls
